

COLLEGE OF FORESTRY

2022–2023 UNDERGRADUATE

ADVISING GUIDE

FORESTRY

Oregon State
University

Advising and Assistance

The College of Forestry is committed to helping students succeed. The Forestry Academic Advisor and the COF Head Advisor are your first points of contact when you have questions.

This advising guide provides details of the Forestry program not listed in the University Catalog, and helpful suggestions for your success as a student. Your advisor is also an invaluable resource for discussions about options to add extra value to your education through additional coursework, minors, additional degrees, or co-curricular experiences.

The most current advising information, and appointment scheduling, is available online:
forestry.oregonstate.edu/student-services/advising

Who:

	<p>Sandy Jameson Academic Advisor Forestry Peavy 116 -C 541-737-6548 (office) sandy.jameson@oregonstate.edu</p>		<p>Nicole Kent Head Advisor College of Forestry Peavy 116 -H 541-737-1592 (office) nicole.kent@oregonstate.edu</p>
---	---	---	--

What:

You can expect your advising appointments to be 30 minutes of one-on-one time with your academic advisor. You and your advisor will both prepare in advance—reviewing your MyDegrees, preparing questions, and looking ahead. During your appointment, you will review your progress to date, make course plans for the upcoming term(s), discuss opportunities and resources pertinent to your goals, and track your progress toward graduation. While your advisor is here to assist and guide you, your educational choices are yours to make. We advise and you decide.

When:

COF students are required to meet with their academic advisor at least once per quarter, and are welcome to meet more often. It's always okay to call, email, or drop in with questions.

How:

The easiest way to schedule your advising appointment is using your advisor's online calendar:
forestry.oregonstate.edu/student-services/advising

Introduction

Congratulations on selecting the Forestry program at Oregon State University! The Bachelor of Science (B.S.) in Forestry is intended to broadly educate and train forest land managers in the biological, physical, and socioeconomic factors that influence forest policies and management actions. Our graduates will be prepared to work for the forest industry, non-industrial landowners, federal and state agencies, non-profits and non-governmental organizations.

The successful forester must understand the biological and physical processes of forest ecosystems, as well as the social, economic, and operational forces that influence forest policies and management actions. The forestry core curriculum includes basic courses in the biological, physical, social sciences, and six months of work experience as well as professional courses designed to prepare students to manage forest resources.

One of the first decisions that you must make as you begin the program is which option to pursue.

The **Forest Management** option is a classical forestry program aimed at active land management from an industrial forest land management perspective.

The **Forest Operations Management** option provides a strong foundation in classical forestry, and includes coursework from the engineering program that is specific to managing forest operations. It also meets additional College of Business requirements for a transcript-visible Business minor that fits with ownership and management of a forestry service business.

The **Forest Restoration and Fire** option includes the same foundation as the Forest Management option, but goes on to provide a stronger scientific focus on basic physical and biological processes that operate in the forest regardless of management objectives.

Graduates from all three options play key roles in helping meet the world's appetite for wood products and the benefits of the broad array of resources from forest such as soils, water, fish and wildlife habitat, and recreation.

Oregon State's Forestry program has a long tradition of excellence in undergraduate education. The Bachelor of Science in Forestry curriculum is accredited by the Society of American Foresters (SAF).

B.S. Forestry Learning Outcomes

The expected learning outcomes of the program include: emphasis on verbal, written and interpersonal communication skills, and development of critical thinking and problem-solving skills. Students will be expected to gain an awareness and understanding of differing viewpoints, and to demonstrate knowledge of international forestry, sustainable forest management, certification processes, and broad ecosystems services.

Learning outcomes for the B.S. in Forestry program:

1. Demonstrate knowledge of forest ecology and silviculture principles to understand how forests and forested watersheds respond to natural disturbances or management activities.
2. Develop skills in geospatial analysis, basic surveying, mapping, and GIS.
3. Demonstrate ability to measure and inventory forest vegetation with precision and accuracy.
4. Develop an understanding of forestry investment analysis and be able to evaluate typical financial investments in forestry.
5. Demonstrate an understanding of the development and execution of strategic, tactical and operational forest plans that support achievement of desired future stand conditions and strategic goals.
6. Demonstrate an understanding of the social and political context of forestry and be able to describe current policies, laws, and regulations governing the management of forest lands.

Forestry Program Structure

The Bachelor of Science in Forestry is offered through a two-phase curriculum that begins with two years of pre-professional coursework, followed by two years of professional coursework (“Pro-School”). Admission to the pro-school program is based on successful completion of all the pre-forestry coursework prior to fall term of the junior year. Enrollment in Forestry pro-school courses is restricted to those students who have been admitted to the professional program.

To be eligible for admission to Forestry Pro-School, students must earn:

1. a grade of “C” or better in all courses for the major (marked with ‘E’ on course list) required for entry into the professional program. Grade repeat (replacement) policy will follow OSU Academic Regulation #20.
2. a minimum GPA of 2.25 in the required courses (or transfer equivalents).

Application for the professional program will be available on the College of Forestry website in March. Applications will be due in early April, and applicants will be notified of their status by early May. The number of students admitted to the program is determined based on available resources. Students meeting the minimum pre-Forestry GPA of 2.25 may or may not be admitted depending on available resources.

Forest Management Option

Forest Managers must understand natural resource systems and how to organize the management of forest resources for multiple uses and multiple values. Successful Forest Managers must be able to communicate with the full spectrum of forest users and those who value forest resources. They must be able to propose management solutions that are compatible with the biological and ecological processes of the forest yet are sensitive to the cultural, social and economic forces that shape forest policies.

Forest Management Option Learning Outcomes

As a graduate of the Forestry – Forestry Management Option, you will:

1. Demonstrate knowledge of forest vegetation modeling and the ability to forecast its development over time using models of forest growth.
2. Demonstrate an understanding of the importance of communication in both planning and practice settings, and be able to communicate effectively with coworkers and stakeholders on forest resource issues and practices.
3. Demonstrate understanding of interaction of vegetation, wildlife, insects, and disease on forested landscapes.
4. Demonstrate ability to identify major forest ecosystems of the PNW and describe their changes over time, with and without human influence/management.
5. Demonstrate knowledge of inter-temporal management and planning at the forest and landscape levels, and the ability to develop alternative management scenarios for forest lands for an array of objectives including forest products, environmental services, social amenities cultural and other resource values.

The core curriculum in the Forest Management Option is a broad-based education, including basic courses in mathematics, statistics, biology and ecology, the physical and social sciences, professional courses in forest biology and ecology and forest management, and at least 6 months of work experience.

Entry-level positions for graduates can include duties that span the full range of forest resource uses and management activities, including: fire control and prevention, watershed protection, wildlife habitat management, forest roads and trails, timber management and regeneration, forest health assessment and insect/disease control measures, community-based forestry, ecosystem services markets and carbon offset sales, and management consulting. Graduates are employed by private and public organizations. Private sector employers include the forest timber and wood products industries, forestry consulting firms, Non-Government Organizations (NGOs) and environmental organizations, and self-employment. Public employers include federal, state, and local government agencies such as the U.S. Forest Service, Bureau of Land Management, National Park Service, Peace Corps, and state departments of forestry and natural resources.

Forest Management Option

Degree requirements: To earn the B.S. in Forestry with the Forestry Management Option, students must complete:

- All Pre-Forestry and Pro-School courses with grades of C or higher
- All courses for the Forest Management option with grades of C or higher
- All courses for OSU's Baccalaureate Core
- Any additional electives necessary to achieve 180 total credits
- Complete at least 6 months of relevant work experience

Pre-Forestry Courses: these courses must be completed with grades of C or higher before students enter the professional program. Courses in regular font are required for the Forestry major and *courses in italics are required for the Forest Management option*. * indicates courses that also fulfill Bacc Core.

Forest Operations Management Option

The Bachelor of Science in Forestry - Forest Operations Management Option is designed as a professional forestry degree that blends elements of forest engineering and forest management with business management and entrepreneurship. This unique option will prepare graduates to support the needs of an evolving forest sector in Oregon and globally. As they gain experience, graduates will have options to serve as project managers for logging or silvicultural contracting service firms, as consultants, or as company or agency contract administrators that supervise a growing contracting work force. Graduates will also be prepared to continue on to graduate school in a variety of disciplines that range from natural resources to business.

The educational objectives of the Forest Operations Management Option are an outgrowth of the Departmental Mission of developing science, engineering and technical solutions that promote sustainable management of forest, land and water resources to meet society's economic, environmental and social needs. This option is intended for students who have strong interest in the operational aspects of industrial forest management. More specifically, students who wish to own or manage a contracting business that provides silviculture, harvesting, or transportation system services to larger companies or agencies, or be employed by companies or agencies to administer contracts and manage operations, much like project managers do in the construction business.

This option meets the requirements for the Business minor from the College of Business. Students in the Forest Operations Management Option must apply to the College of Business to be admitted to the Business Minor.

- **Forestry Principles** - The Forest Operations Management Option will incorporate an adequate presentation of fundamental forestry principles so that graduates will be able to implement and manage forest operations to achieve silvicultural objectives.
- **Soil and Water Resources** - The Forest Operations Management Option will incorporate an adequate presentation of the physical and biological aspects of soil and water resources so that graduates will be able to implement and manage forest operations that appropriately protect these resources.
- **Surveying and Measurement** - The Forest Operations Management Option will incorporate adequate surveying and measurement of land and forest resources to implement and manage the tasks associated with forest land management.
- **Harvesting Operations** - The Forest Operations Management Option will incorporate adequate principles of harvesting operations so that graduates can manage safe, economic, and environmentally sound forest operations.
- **Planning, Economics, and Business** - The Forest Operations Management Option will incorporate adequate principles and techniques for forest land management, operational planning, and business in an environmental and economic context so that graduates can effectively manage operations and the forestry supply chain.

Forest Operations Management Option Learning Outcomes

1. In addition to the learning outcomes defined for the OSU Baccalaureate Core classes, the specific learning outcomes for the Bachelor of Science in Forestry - Forest Operations Management Option are:
2. Demonstrate the knowledge of the potential effects of forest operations on soils, wildlife and water resources by being able to show the tradeoffs of various harvesting systems on soils, wildlife and water resources.
3. Demonstrate knowledge of business laws by being able to apply them to common business practices conducted in a contracting relationship.
4. Demonstrate the ability to apply appropriate knowledge of surveying and mapping tools to implement forest operations by being able to survey and map roads, critical habitat and other common forest features.
5. Demonstrate the ability to collect forest and financial data to analyze the profitability of various forest operations.
6. Develop expertise with technology, equipment, and systems by selecting the systems to be used in conducting forest operations to plan and conduct activities that achieve silvicultural objectives.
7. Demonstrate the ability to plan and administer safe working practices in a variety of forest operations.

Forest Operations Management Option – Curriculum

Degree requirements: To earn the B.S. in Forestry with the Forestry Operations Management Option, students must complete:

- All Pre-Forestry and Pro-School courses with grades of C or higher
- All courses for the Forest Operations Management option with grades of C or higher
- All courses for OSU’s Baccalaureate Core
- Any additional electives necessary to achieve 180 total credits
- Complete at least six months of relevant work experience

Pre-Forestry Courses: these courses must be completed with grades of C or higher before students enter the professional program. Courses in regular font are required for the Forestry major and *courses in italics are required for the Forest Operations Management option*. * indicates courses that also fulfill Bacc Core.

Plan & Design II FE 471: Harvesting Management *Bacc Core – Contemp Global Issues *Bacc Core – Cultural Diversity Free electives, if needed	4 3 3 3 3
	Total Credits	16	Total Credits	14-15	Total Credits	16

Forest Restoration and Fire Option

The Forest Restoration and Fire Option emphasizes active management to accommodate, prevent, mitigate and/or use forest disturbance processes as part of a forest management plan. Disturbance processes, such as wildfire, insect or disease outbreak, landslides, and windthrow, are important considerations in any actively managed forest, regardless of the specific management objective. In forests managed primarily for wood production, where the predominant disturbance is harvest, “natural” disturbance may pose risk of damage to timber values and disturbance management is primarily preventative. Where management objectives include recreation, biodiversity, restoration to historical conditions, or other ecosystem services, these disturbances may have beneficial outcomes; hence, management may include use of disturbance as a management tool or simply as part of a renewal process in a resilient and diverse forested landscape.

The Forest Restoration and Fire option is intended to provide students with the knowledge and skillset to incorporate natural processes, including disturbance, explicitly into forest management planning (whether it be to prevent or mitigate damage resulting from disturbance or to use disturbance processes purposefully to achieve management objectives). This knowledge/skillset is particularly important for managing forests at the landscape scale and in the face of uncertainty and rapid change (e.g. in climate or in land use patterns).

Forest Restoration and Fire Option Learning Outcomes

Specific learning outcomes for the Forest Restoration and Fire option are:

1. Demonstrate ability to develop management responses to natural disturbance on forested landscapes such as wildland fire, insect infestation, windstorm, and disease and to use disturbance as an active management tool in an era of rapid change (e.g. climate change, land use change).
2. Demonstrate knowledge of natural processes in forests, including vegetation growth, wildfire, windthrow, insects and disease, and the ability to use these models of these processes correctly to forecast impacts of disturbance on forests and outcomes of management activities.
3. Demonstrate an understanding of the role of active adaptive management on forested landscapes when outcomes are uncertain.
4. Demonstrate ability to account for risk and uncertainty in forest management decision processes.
5. Demonstrate an understanding of the management of ecosystems in an era of rapid change including change in climate patterns, land use patterns, and political and social institutions.
6. Demonstrate an understanding of the institutional and economic context in which policy for managing forest disturbance has evolved in the U.S. and elsewhere.
7. Develop skills to facilitate negotiation among stakeholders for collaborative cooperation and management of natural disturbance on forested landscapes, particularly across institutions and property boundaries.

Forest Restoration and Fire Option - Curriculum

Degree requirements: To earn the B.S. in Forestry with the Forestry Restoration & Fire Option, students must complete:

- All Pre-Forestry and Pro-School courses with grades of C or higher
- All courses for the Forest Restoration & Fire option with grades of C or higher
- All courses for OSU's Baccalaureate Core
- Any additional electives necessary to achieve 180 total credits
- Complete at least 6 months of relevant work experience

Pre-Forestry Courses: these courses must be completed with grades of C or higher before students enter the professional program. Courses in regular font are required for the Forestry major and *courses in italics are required for the Forest Restoration & Fire option*. * indicates courses that also fulfill Bacc Core.

Note: At the end of the sophomore year students must apply to be admitted to the Forestry Professional Program ("Pro-School"). The courses above must all be completed with grades of C or better and a GPA of 2.25 or higher in order to be admissible to Pro-School for fall of the junior year.

Field School: Pro-School begins with the Forestry Field School prior to fall term of the junior year. It typically takes place in September – two weeks before the junior year begins.

Pro-School Courses: these courses must be completed with grades of C or higher. Courses in regular font are required for the Forestry major and *courses in italics are required for the Forest Restoration @ Fire option.* * indicates courses that also fulfill Bacc Core.

Requirements for Graduation

In addition to the University and degree program requirements, students in the College of Forestry (COF) professional forestry programs must also meet specific requirements to graduate.

All students pursuing the BS in Forestry:

1. must earn grades of "C" or better in all required professional forestry major courses and;
2. must maintain a 2.0 GPA in all major course work.
3. minimum credits required for graduation is 180.

S/U Grading — Students majoring in Forestry may not take for S/U (Satisfactory/Unsatisfactory) grading any course listed as a requirement for the major or option. This includes approved substitutions. Baccalaureate core courses may be taken S/U unless they are also being used to fulfill a program requirement.

Speech — College of Forestry students are required to take COMM 111 or 114 to fulfill the Speech Baccalaureate Core requirement. COMM 111 or 114 cannot be taken for S/U (Satisfactory/ Unsatisfactory) grading.

Grades of “C” or better must be earned in all required courses (or approved substitutions) for majors and options in forestry degree programs.

Approved Work Experience. Six months of work experience is required in all College of Forestry professional forestry undergraduate degree programs.

Credit Hour Requirement – A minimum of 180 credits are required to complete the Forestry degree. In addition to completing major requirements and Baccalaureate Core courses, students may need to complete additional elective courses to reach the 180 credit minimum.
